Dolin	Renate	CA	90265	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Renate Dolin
Dolis	Crystal	CA	94965	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Laura Doty
Doty	Thea	CA	95472	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Thea Doty
Doublet	Yvette	CA	95037	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, janej drexler
Driscoll	Noreen	CA	95132	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Noreen Driscoll
Drury	Bob	CA	90814	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Nuc Duong
Duran	Dani	CA	91325	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dani Duran
Duren	Sheri	CA	92804	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jennifer Eckstein
Economou	Constantina	CA	94704	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Constantina Economou

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Patricia Eguren
Ehman	Jennifer	CA	93023	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jennifer Ehman
ehrhart	carole	CA	93953	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Keith Ellis
Ellis	Susanne	CA	94112	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. The fracking chemicals oil companies would resume dumping into our ocean pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Susanne Ellis
Ellis	Emily	CA	90293	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Emily Ellis
Ellis	Lowell	CA	94546	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jade English
Epperson	Dan	CA	95640	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to ALLOW oil companies TO frack off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly ENCOURAGED Fracking is an EFFICIENT, EFFECTIVE practice that has BEEN PROVEN SAFE FOR our ocean. As you know offshore fracking increases the risk OF LOW GAS PRICES. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is SAFE no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a RESOURCE TO HELP with our ocean's life-support systems. That's why I urge you to ALLOW it once and for all. Sincerely, Dan Epperson
Epstein	M. S.	CA	90036	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, M. S. Epstein
erario	myra	CA	91384	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Estrada	Dylan	CA	92277	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dylan Estrada
ESTUDILLO	ADELA	CA	92802	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Faia	Don	CA	95003	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Don Faia
Fair	Sharon	CA	90275	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Farrell	Francis	CA	92555	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Francis Farrell
Fass	Barry	CA	92108	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I strongly urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karl Fenske

fera	kristen	OH	44111	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Aixia Fielder

Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Juels Fisher

Flint	Ben	CA	94611	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ben Flint

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Nicola Foster
Foster	Richard	CA	92029	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Richard Foster

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mateja Frank
Frankel	Sandra	CA	90403	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sandra Frankel

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Emma Frankenfield
Franklin	Constance	CA	90026	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Protect Californians and our marine environment ! That ability to forsee consequences is the mark of profound people, that is why I implore you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was greatly disturbed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. You are certainly aware that offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Absolutely horrific. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." So why in the world would you propose to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I implore you to prohibit it once and for all. Sincerely, Constance Franklin

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Gianfranco Frelli
Frey	Andrew	CA	91106	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Andrew Frey

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, graham fulk
fulk	graham	CA	93422	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, walter gafforio
Gagomiros	Keith	CA	95814	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Keith Gagomiros

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. I urge you to prohibit it once and for all. Sincerely, Sandra Garber
Garcia	Felipe	CA	95965	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Felipe Garcia

Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jamila Garrecht
Garrett	Richard	CA	92084	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. GCHESA	ELEN	CA	94558	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, What, OUR government officials haven't heard the latest alarming news about the human-induced ruination and destruction of our planet? February was the HOTTEST on record, with 2016 set to be EVEN HOTTER. And it's happening FASTER and FASTER. HISTORY WILL REMEMBER you corporate whores. HISTORY WILL REMEMBER those who ALLOWED the destruction of OUR planet. It is your duty to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory and fake draft analysis of offshore fracking, I was completely disgusted, as you acted, AGAIN, as corporate lapdog to greedy, morally bankrupt corporations that destroy the ONLY planet on which we can live. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. THIS is NOT your job! Your job is to protect US, not greedy, companies that want to destroy Earth. It is well known that many of you dishonest traitors have been promised jobs in the industries you are SUPPOSED to be regulating. How totally repulsive that is, and what a bunch of CROOKS you are. We DO have the technology to get rid of fossil fuels, but criminals like the ones in your agency, ALLOW the corporate crooks to destroy our fragile planet. AGAIN and AGAIN. THIS MUST STOP!!! As you KNOW offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Renee George
George	Laurence	CA	94946	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Laurence George

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ed Giguere
Gil	Savannah	CA	92240	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Savannah Gil
Gil	Seiky	CA	90650	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Arthur L Glattkke
Glatzel	Karen	CA	95570	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen Glatzel
Glenn	Beth	CA	92869	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Anthony Golden
Goldie	Charlie	CA	94546	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Charlie Goldie
Goldin	Martha	CA	94118	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Yazmin Gonzalez
Gonzalez	Rachel	CA	92373	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rachel Gonzalez
GONZALEZ	GERARDO LOBO	CA	94806	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Goodwin	James	CA	90068	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, We Californians live in a notoriously geologically active state, predictably subject to unpredicted seismic activity. Because it has been clearly established that Fracking stimulates seismic activity, even in areas not know to be overly active, it should be clear that California cannot afford to permit fracking off our coast or on our land. I urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mark Gould
Goulden	Joan	CA	90005	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Joan Goulden
Gowani	Nancy	CA	91367	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Nancy Grant
Grattan	Angela	CA	93907	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Greene	Sid	CA	95421	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, California has some of the richest offshore ecosystems in the world. Do not endanger what belongs to all future generations for a few short profits for a few (short-visioned) profiteers. When the ocean is dead, so are we. This means your descendants who will not be immune to a less-than-life-conducive biosphere. leave the oil in the ground and develop alternative energies with new jobs, a more stable economy, and without the requirement we kill our biosphere so someone can continue to lead us down the climate-change road. I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Greenwald	Ken	CA	90404	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ken Greenwald
Greenwood	Barbara	CA	94596	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Grindle	Russell	CA	94533	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Russell Grindle
Griswold	Wallace	CA	95476	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Anita Gryska
Guenther	Michelle	CA	90042	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michelle Guenther

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Todd Gutmann
Gutt	Alex	CA	96145	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Alex Gutt
Gx	Perry	CA	92780	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michael Hague
Hahn	Robert	CA	90290	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Robert Hahn
Haig	Brenda	CA	90803	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Haines	Shauna	CA	94703	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I'm from California, and remember the first devastating Santa Barbara oil spill decades ago. Another spill happened at Santa Barbara more recently. We need to protect our coasts from fracking chemicals and oil, and with our abundant renewable natural resources we don't need fracking to maintain energy independence. I urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen Hall
Hall	Holly	CA	92592	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Holly Hall
Halldorson	Lois	BC	V3S 1V1	CA	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ivan Handler
Hanger	Susan	CA	90290	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Susan Hanger
Hani	Ki	CA	94111	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kay Hardy
Hargraves	Mark	CA	95472	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mark Hargraves
Harkin	Joanne	CA	90291	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, David Harris
Harrison	Cathrine	CA	95407	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Cathrine Harrison
Harrison	Lee	CA	93004	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Marilyn Hay
Hayes	Tim	CA	92115	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Tim Hayes
Hayes	Suzy	CA	95667	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. FRACKING IS NOT "PROGRESS"! FOSSIL FUELS are shortly going to become a thing of the past! As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Susan Heisler
Heist	Roberta	CA	95437	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Roberta Heist
Heller	I. R.	ot	12051	DE	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, P Casey Hennessy
Henrichsen	Susan	CA	92037	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am strongly opposed to allowing oil companies to engage in fracking off the California coast. I was therefore appalled by your agency's draft analysis of offshore fracking, Fracking is a dangerous practice that should not be allowed in our coastal waters. We have more than enough evidence of the extreme damage oil spills cause. Such damage is simply unacceptable, and the dangers of fracking are, to me, even greater. I urge you to prohibit it, unconditionally. Sincerely, Susan Henrichsen
Henriksen	Melissa	CA	95006	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Herbst	Teri	CA	90505	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Teri Herbst
Heredia	Elvia	CA	90680	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Hicklin	Mary	CA	92040	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mary Hicklin
HICKS	ROVEDA HELEN KAARINA	CA	90210	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Hill	Roberta	TX	78703	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, How could you possibly even consider fracking off California's coast? When I heard the news about your agency's cursory draft analysis of offshore fracking, I was outraged. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean ?? or anywhere on land, for that matter! Wise up!!! It doesn't take a genius to know this stuff. Offshore fracking ?? especially in California, of all places! ?? increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." You are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Or shall we just completely RUIN everything on Earth? Sincerely, Roberta Hill

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Linda Hillman

Hilpertshauser	Michele	CA	95033	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michele Hilpertshauser

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jeff Hoffman

Hoffmann	Diana	CA	95246	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Diana Hoffmann

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dennis Holz

holzinger	walter	CA	91326	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, walter holzinger

The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Martin Horwitz

Hottle	Barry	CA	95747	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Barry Hottle
Houlé	Felicia E.L.	CA	93561	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Heather Howell PS. equally critical is the danger to those that fracking exposes, our own threatened Biped population, such as ME, MY FAMILY, & our ENTIRE COMMUNITY. That very real RISK is the proven danger of destabilizing the Pacific plates/Faultline that runs offshore under the same oil rigs. We all saw the death & devastation @ Fukushima, due to the TSUNAMI, even more than from the radioactivity. Our highly populated coastline, commerce & inhabitants, would be sucked out to sea in a fracking-generated TSUNAMI. Please DONT GAMBLE with our LIVES. We all know there are better ways 2 produce energy. Don't let the CORPORATIONS take the LAZY & IRRESPONSIBLE path to satisfy the StockMarket & profiteers. Your constituents have faith in your wisdom. Bless you! HH Heather Howell

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen Hresko
Hricko	A M	CA	94102	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, A M Hricko

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Erica Hummel
Hunkins	Martha	CA	95521	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Martha Hunkins

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, donna ingleson
Ingraham	Lara	CA	90038	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lara Ingraham

Isaak	Patricia	CA	95010	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Haven't you been paying attention to what fracking does to the Earth? Oklahoma is now the earthquake capital of the country. What do you think fracking will do here on the fault line. Do you have children? Grandchildren? Do you care what they inherit? They may inherit your money, but what if those profits destroy their future on this planet? I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, judy jackson
Jackson	Elizabeth	CA	95624	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Jacobson	Laura	CA	94595	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Upon hearing the news about your agency's cursory draft analysis of offshore fracking, I was incredulous. Fracking is a risky practice that has absolutely no place in our ocean and should never be allowed. Offshore fracking increases the risk of earthquakes and oil spills. Last year the Refugio spill demonstrated how much damage oil can do to our coasts. Hundreds of birds, fish, sea lions and dolphins were killed as a result of over 140,000 gallons of crude oil being dumped into the Pacific. With your leadership, we have the power to prevent a recurrence! The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." I understand that you are proposing to allow offshore fracking, since prohibiting it could lead to more fracking on land, thus potentially increasing air pollution and resulting in other harmful effects. Either way fracking is risky, regardless of where it occurs, especially in fragile and unpredictable marine environments. Fracking upsets nature's balance, and we are already reaping the results of man-induced imbalances that have contributed to serious global warming. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Our oceans are already in trouble without adding this to existing problems. Sincerely, Laura Jacobson
Jacques	Karen	CA	95811	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Seriously? This is your argument? That's like me planting land mines in your backyard, and when you ask me what I'm doing, I say, "well, your neighbors complained when I tried to put mines in your front yard." Please, oil companies, get out of California's backyard. You know where there's a lot of money (besides eco-tourism?) renewable energy. I swear you guys have an agenda to hurt normal people in the name of getting us the energy we need. Get into the area of growth before it's grown, so hop on or be left to drown in your own polluted seas. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jamie Jang

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Cynthia Jansen
Jansen	Cynthia	CA	92869	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Cynthia Jansen
Jansen	Leigh	CA	92780	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Renee Jeska
Jesmain	Lee	CA	92277	UM	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lee Jesmain
Jett	Rachael	CA	90501	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. You have the power in your hands to stop this madness. To stop this insanity. Tell me, would you allow your children to swim in waters that would include cancer causing chemicals? Would you want to live along a shoreline after an oil spill? Would you want to know that for as long as you live, for as long as your children live, for as long as your grandchildren live, you and they, will have to live with the knowledge that you could have and should have made sure that those future oil spills, and they Will happen, that you made the decisions that allowed that destruction? Can you really stand there, look into your grandchildren's eyes and say that allowing one more drop of oil to be taken was a good idea? Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lee St. John

Johnson	M.N.	CA	91208	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from "fracking" off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in my state or in our ocean. You already know that offshore fracking increases the risk of earthquakes and oil spills. The Refugio spill last year, reportedly caused by aging infrastructure, showed us how fragile is the barrier between oil pipelines and our ocean, and reminded us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Still others remain in the dubious category of "unknown," as oil companies refuse to disclose what chemicals they are inserting into our groundwater onshore and into our oceans offshore. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which will increase air pollution and groundwater pollution. You are just confirming that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is too big a gamble with our ocean's life-support systems. We cannot continue to decimate our oceans and not reap the damage we've sown. That's why I urge you to prohibit it once and for all. Sincerely, M.N. Johnson
Johnson	Jane	CA	93402	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jane Johnson
Johnson	elvis	CA	94960	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. This is an OUTRAGE! The California coastline is not only fragile it's a joy to Californians and millions of people who visit here as tourists and use our waters. Our wildlife is threatened, our clean water is at risk and all for the last, dying gasp of oil and gas companies who want to extract every last penny from our natural resources before they leave. I'm disgusted. Sincerely, KAREN JONES

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Roslyn Jones
Jones	Carolyn	CA	96141	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carolyn Jones
Jones	Jasmine	CA	91602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, D Streeter Jr
Jr	Gordon Ivens,	CA	90042	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Gordon Ivens, Jr.
Jr	Robert DiGiovanni	CA	93940	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Paul Kalka
kam	scott	CA	93401	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, scott kam
Kamler	Cindy	CA	93514	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Kanner	Allen	CA	94706	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. The science is in. It's horrible for nature. This is a political decision that is being made across the globe and defines our times. In the case of California, either you bow down to the oil and chemical companies money or stand up for future generations of all species. Sincerely, Allen Kanner
